## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over (Kim '012 or CN1324170A) in view of Koide et al '943 (particularly figure 13). (Kim '012 or CN1324170A) discloses the claimed invention except for teaching that the light guide discloses a light guide plate, which guides illuminating lights from a light emitting element of the single display unit device to opposite directions to each other to irradiate both surfaces of a main body part of the display device with the lights and the display is an LCD. Koide et al '943, particularly figure 13, teaches a light guide plate 304, which guides illuminating lights from a light emitting element of the single display unit 301 device to opposite directions to each other to irradiate both surfaces of a main body part of the display device 301 with the lights. At column 4, lines 30-35, Koide et al teaches that LCD's can be used instead of double sided displays. It would have been obvious to one skilled in the art at the time the invention was made to substitute the light guide of Koide et al '943 for the light guide of (Kim '012 or CN1324170A) in order to provide a more efficient light display. Furthermore, it would have been obvious to one skilled in the art at the time the invention was made to substitute an LCD for the display and

attenuation filter of Koide et al '943, figure 13 in order to provide a integral light unit.

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

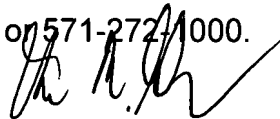

### ***Conclusion***
